

KVM SOLUTIONS

Feel the power, take the **control**...

All in One Video Processor

Introducing ScreenBridge, the revolutionary All-in-One Video Processor. Designed with cutting-edge Matrix, Switcher, Multiviewer, KVM, and VideoWall options, it delivers unparalleled performance.

Discover the limitless potential of ScreenBridge modular system, empowering you to design and build your own tailored solution. With versatile I/O cards accommodating various connectivity requirements, customization has never been easier.

ScreenBridge utilizes FPGA (Field Programmable Gate Array) technology as a hardware-based solution. Its high-performance scaling engine and 10-bit processing guarantee state-of-the-art image quality and maximum reliability.

Its robust and stable design ensures scalability, making it perfect for large control rooms, government institutions, mission-critical environments, conference rooms, live events, corporations, and sports.

Multiview
Free layout design in any output

Matrix
Switch a standard single image on any screen

KVM
Enjoy seamless control of all your sources using just one mouse and keyboard

VideoWall
Use multiple screens to display one of your signals

Bridge4U

Multi-User KVM

Create custom Workstations with unlimited possibilities

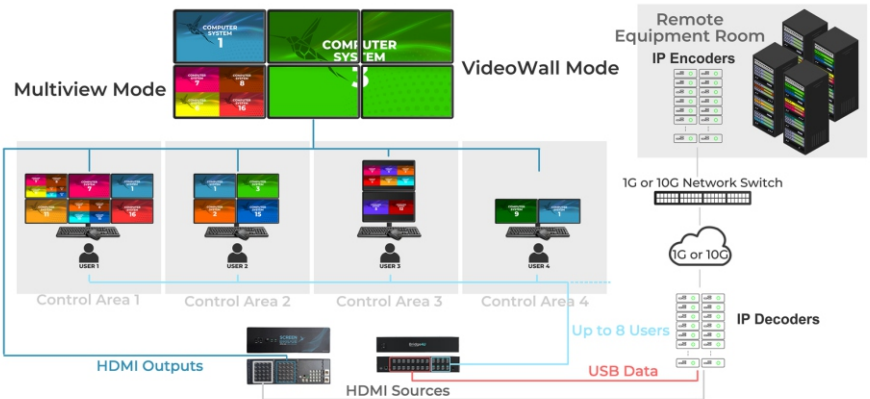

Operate sixteen computers with only one mouse, one keyboard and up to sixteen screens and make your workspace more efficient and ergonomic. Switching between computers is done using configurable keys combinations or directly moving the mouse surfing between the screens.

The Bridge4U does not process video signals. Each monitor is directly connected to the computer. To add video signal flexibility and get the maximum of the Bridge4U, combine it with a 4KCRAFT Multiview or a ScreenBridge All in One Video Processor.

Bridge4U
